

Steps to keep the fish tank clean

Fish lovers always give a unique and different touch of decoration to home spaces with their fish tanks. Knowing about the care of these cute pets is very important to keep their habitat in excellent condition.

With these tricks you will learn to clean the fish tank, they will thank you.

1. Change the water in the fish tank every 3 days, it is best to use bottled water since tap water may contain substances that are harmful to fish.
2. While you clean the tank, place your fish in a clean container that has not been in contact with any chemicals except cleaning products.
3. Remove and disconnect the filter while you clean the fish tank, so you can keep it clean, you only need to use water for cleaning.
4. Use a sponge to clean the dirt on the outside and inside of the fish tank, make sure there are no stains left.
5. Finally, before returning the fish to the tank, check that the water has the same temperature in both containers.
